

Making metal 3D printing affordable

## Software Architect

As a Software Architect, you will serve as a critical member in the development team. This role will focus on the integration of hardware with motion control and proprietary software applications.

## Job description

- overview of the software architecture for the ValCUN technology and able to define subtasks for outsourcing
- you are responsible for the operation of the ValCUN printer
- Leading & communication contact for outsourced software tasks
- Cooperation with technical team

## Your Profile

- Start-up minded
- You are interested and believe in the project
- You have a degree in software engineering
- You are fluent in English, Dutch is an important plus
- You can communicate the software issues to the team
- You like to keep your projects well-structured and you have attention for details.
- You are open-minded to innovation
- You are willing to keep learning
- Knowledge in 3D printing (software) is a plus

## Offer

- Be part of a potential tech start-up in a fast growing market
- Young and dynamic team
- Lots of variation and room for personal skill development

*“Always trying new things is always more fun, and it can be scary, but it’s always more fun in the end” - John Krasinski*
